### **Diagnostic imaging provides high-tech care close to home**

For Immediate Release

**(COLUMBUS, Neb.)** – Columbus Community Hospital’s diagnostic imaging department offers a wide variety of diagnostic tests. With state-of-the-art equipment and highly skilled staff, the hospital is here to help patients of any age deal with many different issues.

The diagnostic imaging department is an accredited facility of the American College of Radiology in computed tomography (CT), mammography and magnetic resonance imaging (MRI).

“We want to serve all of our clients when they need it with the best possible care,” said Denise Tomek, director of diagnostic imaging.

The department has three board-certified radiologists and is staffed 24 hours a day, seven days a week with registered technologists who are here to take care of patients.

The department also uses the latest office technology for faster reporting on exams and easier transmission of images to other facilities when necessary.

Patients can visit the diagnostic imaging department for everything from CT scans and MRIs to ultrasounds, X-rays, 3-D mammography tests and more, without traveling from facility to facility or to another city.

“We keep our equipment current and always have the latest technology available,” said Tomek.

Whether it be for unexpected traumas, diagnosing an illness or caring for patients with long-term diseases, the hospital’s diagnostic imaging department is here to provide the very best care.
